

Tree & hedge planting for contractors

SUBJECTS COVERED

- **WHY CORRECT PLANTING MATTERS**

Outlining the consequences of poor planting, and how this is often down to very simple errors.

- **PLANTING DEPTH & SOIL CARE**

A look at correct soil management and how to ensure the critical correct planting depth of new trees and hedges.

- **STAKING**

An overview of the most common types of tree staking systems, and if and when they should be removed.

- **TREE & HEDGE ESTABLISHMENT**

How to ensure your trees and hedges survive and flourish.

- **AND MUCH MORE!**

A comprehensive 2-hour webinar to help contractors understand best practice around tree and hedge planting

Successfully implemented landscape schemes not only improve the lives of the people interacting with them, but they also reflect on the contractor for years afterwards. Poor planting practice is extremely commonplace and is responsible for excessive failure rates, poor performance and wasted time and money. The result is landscapes with gaps left by dead trees, and the remaining trees often living sickly, shortened lives. A few simple steps make a huge difference.

Led by Tom Angel, Chartered Horticulturist, Master of Horticulture (RHS) and former landscape maintenance contractor, this webinar provides a comprehensive overview of the common errors made when planting new trees. Simple steps to ensure correct planting depth, adequate staking and correct establishment of trees will be outlined in this short but comprehensive webinar, allowing contractors to ensure their planted trees flourish.

Courses are held on demand – call Tom on 0141 432 1141 to discuss your requirements.
