

Landscape inspection skills for property managers

SUBJECTS COVERED

- **WHY GREEN SPACES MATTER**
An overview of the health benefits of quality green spaces, along with their social benefits and influence on property prices.
- **THE MAIN QUALITY ISSUES**
A breakdown of the key maintenance issues, and how to address them.
- **KEEPING RESIDENTS HAPPY**
Balancing best practice horticulture, cost, and client expectations.
- **FINDING GOOD CONTRACTORS**
An overview of the benefits of different size and types of contracting companies.
- **AND MUCH MORE!**

A comprehensive 2-hour webinar to help managers effectively assess and address landscape maintenance standards

In this era of Biodiversity Net Gain (BNG), Environmental, Social & Governance criteria (ESG), and Environmental Horticulture best practice, getting your green spaces working for you and your residents could not be more important. Close collaboration between the property management and landscape industries is critical and, done effectively, this can benefit everyone.

Led by Tom Angel, Chartered Horticulturist, Master of Horticulture (RHS) and former landscape maintenance contractor, this webinar provides a comprehensive overview of landscape maintenance issues and how they can be addressed. The subjects covered will allow you to: more easily assess the quality of your green spaces, communicate with your contractors and, crucially, find out how to marry the competing demands of client expectations, cost, and ensuring best practice environmental horticulture is possible on your sites.

Courses are held on demand – call Tom on 0141 432 1141 to discuss your requirements.
