

Writing landscape maintenance specifications

SUBJECTS COVERED

• WHY GREEN SPACES MATTER

An overview of the health benefits of quality green spaces, along with their social benefits and influence on property prices.

• THE MAIN QUALITY ISSUES

A breakdown of the key maintenance issues.

• WHAT IS IN A SPEC?

Breaking down what needs to be in a landscape maintenance specification, what can go wrong, and how to pre-empt the issues using example specifications.

• ADAPTING TO NEW LANDSCAPES

Adapting to new types of planting, wildflower meadows, sustainable drainage infrastructure and more.

• AND MUCH MORE!

A comprehensive 2-hour webinar to help managers write effective landscape maintenance specifications

Generic landscape specifications are a necessity for both the property management and landscape industries. However, they create a rigidity around the work being carried out in dynamic, living landscapes, and this has resulted in the well-documented decline in quality of our green infrastructure. Close collaboration between the landscape sector and property management industries is critical to address this, and by using better landscape maintenance specifications, the benefits can be broad-ranging – for the residents, property managers, contractors, and wider society.

Led by Tom Angel, Chartered Horticulturist, Master of Horticulture (RHS) and former landscape maintenance contractor, this webinar provides a comprehensive overview of generic maintenance specifications and exactly how these can be adjusted and re-written to help address common quality issues encountered when managing green spaces.

Courses are held on demand – call Tom on 0141 432 1141 to discuss your requirements.
